Abstract: The high-technique product will influence our live quality and convenience that it means the sustainably searching must be following through exerting the engineer, researcher &scientist effortful results from all of aspects at all. So the scientist writes his achievement paper on high-factors-journal will meet the time requirement for sake of erecting the experimental result and subsequent modeling structure mutually to prove his result being correct within defined field. We scientist needs to explore and visit wider defining fields and fringe ones so as to occupy the advance position knew how to proceed his relevant searching on earth that may create many progression courses in his complete research area with relative multi-disciplinary fields. At the same time, some crossing-disciplinary subjects will be preceded continuously by scholars and many things about its new-approaching-behavior how it can promote the scientific progress forwards and make many achievements through wielding their deductively basic theoretical formula and experimental explanation correctly. About the further deepening course in academy searching for those non-matures and no-stabilized ones the scientist must precede its difficulty point conquered one by one to afford the power calculation capacity to build fitted ones to share together. On the other side, the research destination may be completed after its papers are to be published in famous journal transformed into the automatic-product-line one that it will last much time and endeavor to push including the application product in actuality usefulness. Through continuously proceeding upgrade the mature product can be formed and produced gradually within lasting many years probably. The key-point-technique must be maintained inside grasping to reserve certain time to make its feasibility completely, then the technique will transform to published paper in journal that become the key role in exerting its influence towards expertise views with its product that it owns its new formality content &multi-functions together for us to apply to the actually producing procedures in making-shop. For completing those destination the much works would be done including the initial sample making trial performance fix parameter &reproduce until it is finally finished where the experiment result and test performance might be exhibited in a specification with the approval by engineer manager and corresponding engineer signature that may be sought the detail performance data as a criterion one to exert its normal anticipating longevity and quality

Introduction

The artificial intelligence technological exhibition will be called as a new innovating reformation and revolution that its making technology has more complicated than automatic one divided into software and hardware with precise movement control logical integration-circuit with embodying both of them so that it might emulate human-

This is an open access article under the CC BY-NC 4.0 license

being behavior and judgment to exerting its all of functions to become humanoid whose meaning may be more widely not only in simple emulation but also creating more innovation ones than normal human rapidly and accurately. The situation now can be initial stage exhibited in central television spring-festival with one hundred robots to dance and some somersaults like sport-man in accordance to the unifying action strictly to show their super-action characteristics. So that the approval ones from audience to the nationwide positive attitudes. But it has still the lack of low-cost problem and occupying more energy and subsequent algorithm that may enhance its actuality usefulness by now. The solution to that one may be not short time to easy change where the scale producing maybe one good idea but the high-price still meets difficulty for us to purchase in individual family and restaurant. Probably many years later its commercialization can be feasible through our endeavour and low-cost materials and procedures for the sake of declining its price ultimately. Other high-technique business will be vehicle battery that it may be searched on research &development department and many college laboratories sustainably to meet all of tasks met in front of us, thus the created cost will be declined and tolerate more long milage and times even in strict area like cold norther one at all. As a traditional industry the vehicle can represent the new and old kinetic energy transforming time so that the best chances can we meet so as to export others with low price one sustainably. The chance must be held by our motor manufacturers to transform into new energy vehicle rapidly and successfully that may be a best answer.

In short, the AI robot can exert its effective role in future pillar business in advanced secondary industry whose influence will affect everyone in the world, thereby the prudent research on its developed level and degree by our experts and senior specialists commonly in relevant conference and published papers in journals sustainably and frequently besides that the common user's comment after they used some time in restaurant for transiting the freight directly to customer promptly and precisely. The relevant evaluation like the performance and longevity must be trialed in experimental room many times rotation and action so as to whether or not enduring a qualified requirement proposed by customer and maker commonly. The another one will be the security and reliable ones where the mistake whether or not to happen can be guaranteed within a defined time for ensuring that the best characteristics might be attained in a specification to final customer. [1~20]

Discussions

The advanced equipment needs to be made largely in relevant maker knowing how to precisely predict the number in customers specially in oversea market demands from deducing current alignment allocation and distribution abroad. Therefore, the five years strategic planning even decade later one can be made by engineers and specialists according to their experience in the past for the sake of ascending those potential devices sale number in future realized what to be produced and how many to be done. The manager might be according to those planning to make the detailing measure to complete it and subsequently the task making diagram so as to do actually in light of guaranteeing its exerting power to process the producing task for 12 months per year etc. with regarding preparation course in a conference in year-end, at the same time propose the fiscal years. On the focus issue like the loaning capital for this year fiscal budget he must cooperate with the board of directs who might approve that fiscal budget from the bank for loaning the demand capital to company. Those fiscal year will include in the new factories and flow-line subsequently that may be passing through the board of directors for enhancing the capital investment and product per one cost declination.

Stock price changes

The stocks price variation per day would be exhibited in Table 1 where 13%~0% increasing rat by <Suiyuan Tech>~<Aiwei Electron> to manifest the <Qiangyi Shares> biggest increasing rate with 3.6%.

Table 1 the stock price variation. [1]

Names	Price, yuan	Increasing rate,%	Names	Price, yuan	Increasing rate,%
Suiyuan Tech	559	13	Muxi Shares	569	8.8
Ruike Da	36	-1.5	Huana Pharmacy	53	5
Qiangyi Shares	271	3.6	Tianneng Shears	18	-2.8
Dianke Lantian	45.3	-4.7	Aiwei Electron	60.8	0

Subject for the Humanities Social Science and Management

As to author, the International Journal of Humanities Social Science and Management (IJHSSM Journal) is an online open access journal. Publishing articles from more than 50 countries in the field of Humanities, Arts, Music and Education. Papers published in IJHSSM will receive very high publicity and acquire a very high reputation. The process will be like submit article, review process, pay fees, then publish online and Certificate. Therefore, we are pleased to invite your submission contributing to the both sides, we are going to publish your valuable paper after peer reviews course through specialists. [2]

Chinese cities &Los Angeles GDP analysis

The Chinese cities &Los Angeles GDP analysis would show 109 billion dollars~20 billion dollars by Los Angeles~Chongqing city accordingly in 1996 to illustrate the former strong economy strength in light of Figure 1. The y-o-y growth value might exhibit 4.4%~49.3% by them respectively to manifest the Chongqing city the rapidest developed pace exceeding Shanghai city with 46% pace. There, SB two represented the Shanghai &Beijing two cities with the 44% pace occupied second position.

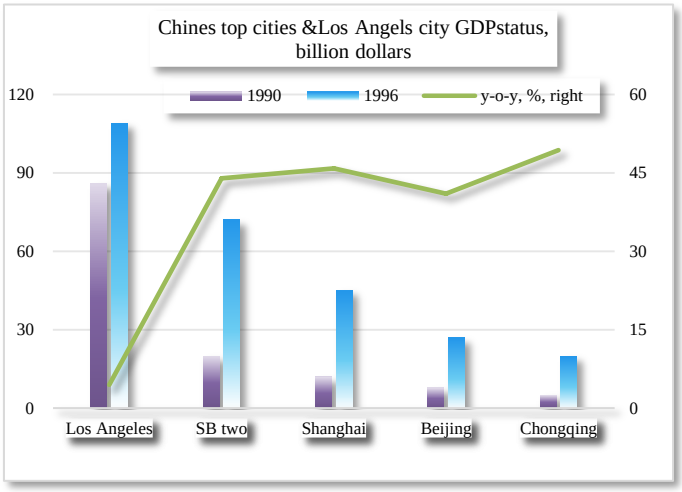

Figure 1 Chinese cities &Los Angels GDP analysis. [3]

The Chinese top cities &Los Angeles GDP analysis would show 82 billion dollars~4 billion dollars by Los Angeles~Chongqing city accordingly in 1989 to manifest the former strong economy strength in light of Figure 2. The y-o-y growth value might exhibit 14%~26.7% by them respectively to manifest the Beijing &Chongqing city with the same &rapidest developed pace exceeding SBGC four cities ie. Shanghai Beijing Guangzhou Chongqing four cities with 21.5% speed. On the contrary, the Shanghai one remained its lowest pace with 14% speed there and then.

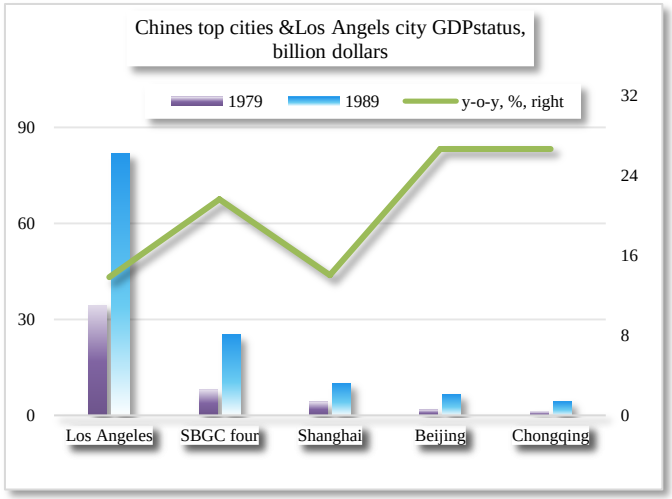

Figure 2 Chinese cities &Los Angels GDP analysis I. [3]

The Chinese top cities GDP analysis would show 4.2 billion dollars~2.4 billion dollars by Guangzhou~Qingdao city accordingly in 1989 to manifest the former strong economy strength in light of Figure 3. The y-o-y growth value might exhibit 42.5%~24% by them respectively to manifest the Guangzhou city the rapidest developed pace exceeding other ones.

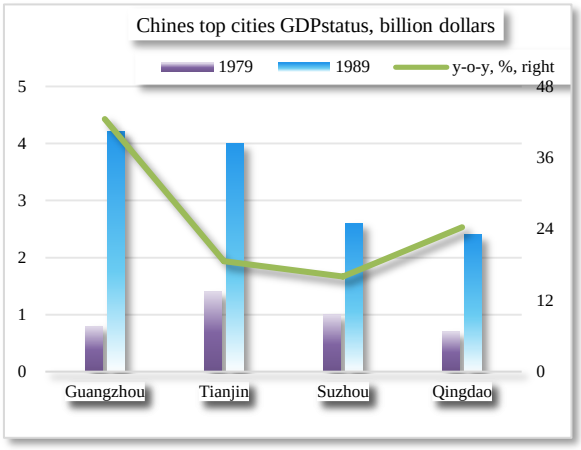

Figure 2 Chinese top cities GDP analysis. [3]

In summary, the hydrogen fuel battery is to be searched for from several decade years ago to occupy the future promise candidate advance position after more than decade years for our engineers and specialists to think about its future usefulness widely prepared behaviors from now on. The BYD blade battery was found in March 2020 called as "Lithium iron phosphate" which has more powerful application in BYD vehicle types. That battery has adopted the best gravity ratio discharged capacity and has been fatigue life 1MKm and recycle life trial times attained above 3,000. So that advancement product can change the key limitation from traditional performance accounting for producing new &high technique to drive the current limitation capacities that it may enhance the GDP value a certain degree. The detail data needs to be investigated from the relevant materials in database to know what degree occupation it can share and what engineer and economist should do later etc. A series of problems needed to carefully do best alignment. We should continue to develop that best performance largely from the laboratory to the research &development and entirely supplying chain through producing &searching sides collaborated relationship by them together.

Conclusions

With surging time of technique seeking to change the world answer will be important task for us to chase due to meeting a new technique challenge with high and advanced mind to weapon our brain and bodies. The eminent role with the innovation one affords more sophisticated and directional task day by day through exerting our specialist and scientists actively act on exploring the new function sustainably. We should foster the excellent engineer from the research &development department in a maker and directly from the graduate in a good university for the sake of consisting in continuously workable capacity defined in a field. Therefore, the educating the talent from graduated in a better department may occupy a significant influence sustainably and constantly producing those new ones with better performance and quality for serving society urgently and immediately whose leader may pay more attention to educating those new graduates for choosing the best one having wisdom and brisk feature in the workshop. The higher level ones are to be owned the more advancement product can be produced by the department continuously produced now whose role may be directly hitting the destination as soon as possible. Thereby, the better from learning in college the more achievement can be acquired by the specialist leading in a manager position making us to know how those new ones may be worked all the course of items. The succeeding ones have to own himself method to be promoted from basis one to advanced one in a manufacturer with the help of the specialist advocating and approvals. On the other side, one team might form one task to produce the future new function product so that the many ones may be completed by a group to reserve more non-mature explorations waiting for the transaction by the managers for the sake of having a space time to balance the market requirement controlled the actual speed. From the sample to mature product the many joints can be passed through the sample producing trial reviews reproducing until the best conditions may be attained besides that the customer is to be approved at all.

Ethic Declarations

The authors declared that there were not conflicts of interest to disclose.

Funding

This work was supported by the Korean Science &Engineering Fund(KSEF) at the granted No. 96-0300-11-01-03 under the Specified Basis Research Program.
